Plant Phase	Veg	Veg	Veg	Veg	Transition	Transition	Transition	Transition	Transition	Fruit/Flower	Fruit/Flower	Fruit/Flower	Fruit/Flower	Fruit/Flower	Fruit/Flower	Fruit/Flower	Fruit/Flower	Fruit/Flower	Fruit/Flower	Pre-Harvest
Week	1	2	3	4	5	6	7	8	9	10	11	12	12	12	12	12	12	12	12	2-4 Days

Indoor Flowering Plants – Water these plants with the "tea" at least 1 time per week and no more than 3 times in a week. 3 times per week would be considered an aggressive feeding for indoor plants.*

Mexican Bat Guano	1 Tbsp/gal	1-2 Tbsp/gal	2-3 Tbsp/gal	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	Plain Water
Peruvian Seabird Guano	0	0	0	1-2 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	0	0	0	0	0	0	0	0	0	0	0	0	0	
Jamaican Bat Guano	0	0	0	0	0	0	0	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	
Indonesian Bat Guano	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	

Outdoor Flowering Plants – Water these plants with the "tea" at least 1 time per week and no more than 4 times in a week. 4 times per week would be considered an aggressive feeding for outdoor plants.*

Mexican Bat Guano	1 Tbsp/gal	1-2 Tbsp/gal	2-3 Tbsp/gal	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	Plain Water
Peruvian Seabird Guano	0	0	0	1-2 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	0	0	0	0	0	0	0	0	0	0	0	0	0

Indonesian Bat Guano	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	

Week	1	2	3	4	5	6	7	8
Light in Hours/Day	18	18	18	18	18	18	18	18

Indoor Herbs and Leafy Greens – Water these plants with the "tea" at least 1 time per week and no more than 3 times in a week.

Mexican Bat Guano	1 Tbsp/gal	1-2 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	0	0	0	0
Peruvian Seabird Guano	0	0	0	2 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	Plain Water

Outdoor Herbs and Leafy Greens – Water these plants with the "tea" at least 1 time per week and no more than 4 times in a week.

Mexican Bat Guano	1 Tbsp/gal	1-2 Tbsp/gal	2-3 Tbsp/gal	0	0	0	0	0
Peruvian Seabird Guano	0	0	0	2 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	2-3 Tbsp/gal	Plain Water

These mixtures are based on a guano "tea". In order to get the entire benefit of nutrients from a "tea" it is important to allow the guano to soak. In other words the "tea" mixture is best prepared at least 48 hours in advance, 72 hours for the PSG. If you prepare the "tea" in a container with a lid make sure it is vented (a small hole will suffice).

If you choose not to make a "tea" and would rather use the fertilizers as top-dressing simply halve the amount of fertilizer as listed above and mix dry guano into the top 2-3" of soil per plant. Water plants thoroughly or allow fertilizer to sit until it rains.

Another easy soil application is 2 to 4 tablespoons per foot of plant (tall or wide) top-dressed every 3 to 4 weeks.

Organic feeding is by no means an exact science and there is no substitute for attention to your plants. Watch plants closely and adjust feedings according to plant response. What a plant needs depends on many factors, including light, soil conditions and composition, ambient temperature, etc... Remember all plants, but especially your indoor plants need to have well-drained soil.

*Note: Remember to always pay close attention during an intense feeding regimen. If your plants show signs of stress immediately cut back on feedings and flush them with plain water. As with any high-nitrogen fertilizer such as Peruvian Seabird Guano plants will only use what they need and any excess has the potential of causing harm.
